

## VIEW CRITICAL PLANT ASSET INFORMATION TO STREAMLINE DECISION-MAKING

### AMS® SUITE: ASSET PORTAL™ GIVES ENTERPRISE-WIDE DIAGNOSTICS

Use AMS Asset Portal to gain a unified view of predictive maintenance and equipment performance information for your critical plant assets. A core component of Emerson's PlantWeb® digital plant architecture, AMS Asset Portal consolidates field-generated data into a single meaningful view, accessible in a web browser. No matter where your assets are located, you can obtain valuable information for making decisions before problems affect your process.

From AMS Suite, alerts and events are passed to AMS Asset Portal, providing up-to-date information on the status of your assets. These categorized incidents allow you to focus your attention on the most severe problems in the field. With the Work Notification capability, you can route these alerts to your Enterprise Asset Management (EAM) system to automate work notifications.

AMS Asset Portal offers new reporting capabilities that allow you to highlight problematic assets and create alert trends to pinpoint when assets cause trouble and understand the types of alerts that are affecting your critical assets.

### STREAMLINE MAINTENANCE PROCEDURES WITH A COMPLETE PICTURE OF ASSET HEALTH

- Eliminate the need to manually create work orders for critical assets with the Work Notification capability.
- Create meaningful reports that accurately show how well your assets are performing.
- Gain a broad view of critical asset details across your enterprise, even across multiple plants, for faster and more accurate decisions.
- View a snapshot of your enterprise's overall health to aid in determining availability and performance.
- Aid plant management in long-range performance monitoring and historical analysis.

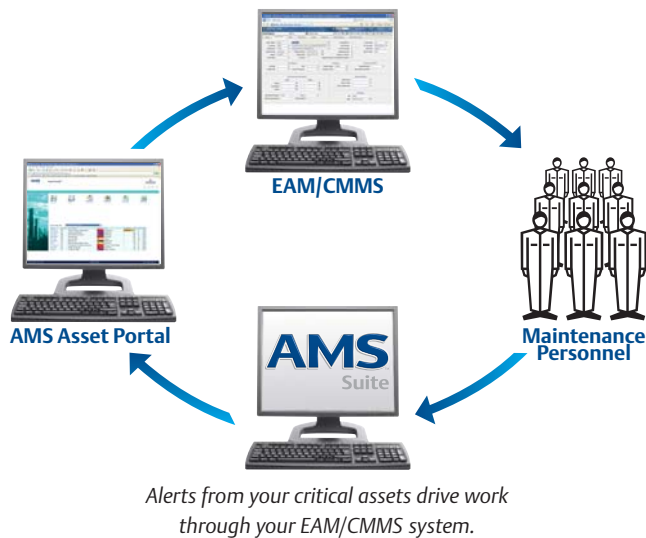

AMS Suite: Asset Portal powers PlantWeb by providing reporting, analysis and decision support on production assets to improve availability and performance.

## DELIVERS THE RESULTS YOU NEED

### IMPROVE MAINTENANCE EFFICIENCY

Capture powerful diagnostics and categorized data from your assets in the field and use this information to support decision-making. AMS Asset Portal can filter data to find the information that is important to you. With the rules and policy engine, you can specify which alerts should create work in your EAM system.

### GAIN FULL VALUE FROM YOUR INVESTMENT

Take a closer look on how well your assets are performing with AMS Asset Portal's extended reporting capability. Create reports for problematic assets, trend alerts from the plant level down to the asset level, and highlight alerts generated by your most critical assets.

Trend alerts to see which assets are interrupting your process.
