

# Fisher™ A31A Cryogenic High Performance Butterfly Valve

The Fisher A31A Cryogenic High Performance Butterfly Valve (HPBV) is designed for extreme temperature cryogenic services and features a valve body extension which positions the packing system and the actuator away from the extreme temperatures. The NPS 3 through 12 valves feature a unique one-piece investment cast extension housing. The NPS 14 through 24 valves employ a two-piece fabricated extension housing. The valve also features a metal NOVEX seal as standard providing tight shutoff, low operating torques and the rugged durability needed for cryogenic service.

The A31A Cryogenic HPBV has been developed as a valve/actuator package with a Double D drive shaft (standard for NPS 3 through 12) to allow easy, direct mounting to the Fisher 1035 Rack and Pinion actuator, eliminating the need for external coupling systems. Also available are keyed shaft (standard for NPS 14 through 24) and splined drive shafts to allow easy mounting to other Fisher actuators.

The A31A Cryogenic HPBV is available in either flangeless (wafer) or single flange styles, and S31600 is the standard valve body and disk material. This valve is offered in full rated CL150 and CL300 pressure classes.

## Features

- **Cryogenic Seal Improvement**—The NOVEX pressure-assisted metal seal design provides tight shutoff (ANSI Class VI, ambient) and permits the use of smaller, less expensive actuators in applications requiring full ASME B16.34 shutoff capabilities. The NOVEX seal is standard on all A31A Cryogenic valves.
- **Direct Actuation**—The A31A Cryogenic NPS 3 through 8 Double D shaft allows direct mounting with the 1035 actuator, eliminating the need for a coupler.
- **Excellent Shutoff Integrity**—Concentric rotation enables the valve disk to remain in the closed position in spite of line pressure surges or actuator failure.

- **Safety**—Redundant shaft retention provides added protection. The packing follower and shaft step interact to hold the shaft securely in the valve body. The NPS 3 through 12 valves use a one-piece packing follower, and the NPS 14 through 24 valves use a two-piece follower (see figure 4).
- **Strength**—The cast S31600 one-piece extensions are welded directly onto the NPS 3 through 8 valves for greater strength under service conditions.
- **Easy Installation**—The valve body self-centers on the line flange bolts as a fast, accurate means of centering the valve in the pipeline.
- **Reliable Flange Gasketing Surface**—Seal retainer screws are located so there is no interference with the sealing function of either flat sheet or spiral wound line flange gaskets.

## Installation

Recommended installation for the A31A Cryogenic valve is with the shaft upstream of the seal (reverse flow).

Dimensions for wafer-style and single-flange valves are shown in figures 5, 6, 7, 8, 9, 10, 11, and 12 and tables 3, 4, 5, 6, 7, 8, 9 and 10.
